

Mock exam (9 possible questions as an extended example)

Question 1:

How many of the following statements correctly describe elements of the Kano model?

1. Basic (must-be) attributes are often unnoticed when present but lead to dissatisfaction if absent.
2. Performance attributes create dissatisfaction when poorly executed and satisfaction when executed well.
3. Excitement (delighter) attributes can significantly increase satisfaction but their absence does not reduce satisfaction.
4. Over time, some excitement attributes may evolve into basic attributes as customer expectations shift.

- A) One
- B) Two
- C) Three
- D) All four

Question 2:

How many of the following statements correctly reflect the dimensions of brand associations?

1. Strong associations are retrieved consistently across relevant usage or purchase contexts.
2. Favorable associations typically align with customer needs and perceptions of value.
3. Unique associations tend to have limited strategic importance unless linked to competitive positioning.
4. High brand recall tends to indicate strong emotional brand relationships.

- A) One
- B) Two
- C) Three
- D) Four

Question 3:

How many of the following segmentation bases are correctly matched with examples?

1. Geographic – climate zone or region
2. Behavioral – frequency of product use
3. Psychographic – age and marital status
4. Demographic – income or education level

- A) One
- B) Two
- C) Three
- D) All four

Question 4:

Which of the following statements is incorrect?

- A) Conjoint analysis can be used to estimate customer preferences and trade-offs.
- B) Eye-tracking studies help uncover unconscious patterns in consumer attention.
- C) Focus groups are typically more reliable than quantitative surveys for statistical testing.
- D) Experimental designs are useful for testing causal relationships in controlled settings.

Question 5:

How many of the following pricing behavior effects are correctly described?

1. The compromise effect results in increased preference for middle-tier options in a set.
2. Anchoring makes consumers more sensitive to small absolute differences in price.
3. Reference prices can be shaped by internal memory and external presentation.
4. Mental accounting can lead consumers to treat money differently depending on its source or intended use.

- A) One
- B) Two
- C) Three
- D) All four

Question 6:

Which of the following statements reflect plausible causes or conditions of channel conflict?

1. Manufacturers that enter direct-to-consumer markets may face resistance from their retail partners.
2. The expansion of private label products can increase competitive tension within distribution channels.
3. Exclusive distribution models typically align the goals of all channel members and reduce conflict risk.
4. Conflict mitigation can involve setting joint objectives and aligning incentive structures.

- A) Only statements 1 and 4
- B) Only statements 2, 3 and 4
- C) Statements 1, 2 and 4
- D) All four statements

Question 7:

How many of the following statements are correct regarding distribution strategies?

1. Direct channels increase the manufacturer's ability to gather customer insights.
2. Indirect channels often offer broader market reach but can reduce brand control.
3. Omnichannel strategies intentionally separate online and offline experiences.
4. Indirect distribution is generally more cost-effective than direct channels.

- A) One
- B) Two
- C) Three
- D) Four

Question 8:

How many of the following statements describe forecasting approaches used in innovation management?

1. Scenario planning addresses uncertainty by exploring multiple plausible future environments.
2. The Delphi method relies on a single expert's judgment to minimize variability.
3. Trend extrapolation assumes that historical patterns will continue, making it suitable for stable markets.
4. Forecasting is typically used only after a product has reached the late growth stage.

- A) One
- B) Two
- C) Three
- D) All four

Question 9:

Which of the following statements is incorrect?

- A) Agile development relies on iterative cycles with frequent stakeholder feedback.
- B) Waterfall is well-suited to projects with ambiguous requirements and evolving technologies.
- C) Agile methodologies prioritize working prototypes over extensive documentation.
- D) Waterfall emphasizes linear sequencing and upfront planning.
